

The logistic plastic pallet is idea for logistic purposes and for use in rotation circuits at height, open or closed.

#### Characteristics and benefits:

- Stronger and more durable than traditional wooden pallets, offering a longer useful life.
- They are totally unaffected by humidity and rain, showing no changes in size or shape. Furthermore, they maintain a constant weight throughout their useful life.
- Suitable for all product categories and uses in any sector.
- The materials they are made from prevent the development and nesting of microorganisms and parasites, and they are easy to clean and sanitise. They have no watertight zones.
- No type of maintenance required throughout their useful life.
- Long useful life and easy repair make them highly reusable and easy to recycle.
