

These cardboard fittings can be used to protect both inner and outer corners of boxes and can also be used to stabilise pallet-stacked cargo. We also have a range of flexible fittings that adapt to the shape of your cargo. They ensure boxes remain properly stacked by preventing lateral displacement. They protect the edges of delicate packaging and are especially recommended for goods being shipped for final sale. They safeguard sack-packed cargo (e.g. potatoes, building material, etc.). They distribute the tension created by fissures, strapping, belts and stretch wrap film. They allow for more efficient cargo stacking and use of space. Better cargo securing on lorries.

<b>CANCART03</b>	CANTONERA CARTÓN 35x35x3mm.2m.l. (PAQ.26)
